

Screenshot Proof:

The screenshot shows the Jira interface for the 'Book-Club-Site' project. The 'BCS board' is selected, and the 'Backlog' tab is active. The backlog contains 12 work items, each with a checkbox, ID, title, epic link, status, priority, and assignee. The items are listed in descending order of priority.

Item	ID	Title	Epic	Status	Priority	Assignee
☒	BCS-2	Story 1.1 : Logging in	EPIC 1 : A...	To Do	1	[User]

Burdown chart

Epics:

EPIC 1 : Authorisation

Book club members should be able to authenticate themselves and log onto their accounts before being allowed to post comments under chapter threads or go to see user profiles. Different users may also register themselves via email or some other authentication method

Story 1.1 : Logging in

As a book club member I want to be able to login by:

- Email Address
- Phone Number
- Username+Password

so that I can make a profile and access the chapter threads to write comments.

Story 1.2 : Register New Book Club Members

As a new Book Club Member I want an account on the site and I want the options to be able to login via:

- Email
- Phone No
- Username + Password

So that I can access the website, make a profile and participate in discussions.

Story 1.3 : Book Club Leader to Accept

As a book club leader I want to be able to accept any new registrations and see how the new member registered in my mail account. If they are an actual new user I should be able to accept them. If they have a contact method listed a message should be sent there saying they have been accepted. So that they are able to join the club properly and participate in club activities

EPIC 2 : UI/UX

The UI for the Website should be readable for the user. The UX should be allow for ease of use and allow the site to be navigable. The site should also be responsive and show items soon.

Story 2.1 : Different chapters have different dedicated threads

As a club member I want to see the different chapters. They shouldn't have spoilers and they should all have a page dedicated to their threads. I can discuss chapter-specific plot-points there. So that there is a clear delineation between chapters which stops me from getting spoiled and I know what is being referred to in a discussion.

Story 2.2 : Unique user Profiles

As a club member, I want a unique profile which reflects who I am. It will have my club role, name and any additional details. I also want a profile picture which I can upload. So that I can set myself apart and tell others who I am

Story 2.3 : Poll voting & Submission

As a user I want there to be a monthly poll shown in the front page with a timer to show when voting starts and ends. I also want to cast a vote or submit potential book entries for the monthly poll. So that I feel like I have a voice in what's chosen to be read that particular month.

EPIC 3 : Response Handling

The database must be able to manage responses and messages sent in threads. I should also help keep track of the poll, may it be the votes or the submissions for the next months poll

Story 3.1 : Thread logging

As a message server I want to record messages sent on the chapter threads. They should be delineated and processed to check for spoilers. If they have any that area must be blurred when it's displayed on the club members web browser. So that the conversation between members is sustained and no one is spoiled.

Story 3.2 : Poll Submissions

As the club leader I want to see all the book submissions for the next month that are sent by normal members. So that I may vet what shows up on the poll

Story 3.3 : Poll vote handing

As the Book club head, I want to see how the voting goes and get every vote sent to me so I can check for discrepancies. So that the vote remains fair and I know what book is to be read next month.
